## **AMENDMENTS TO THE CLAIMS**

This listing of claims replaces all prior versions and listings of claims in the application:

Attorney Docket No.: 60004-109US1

Client Ref. No.: F 04-038-PCT/US/NS

## Listing of claims

1. (Currently amended) A method for the production of a fluorinated phenylenediamine represented by the following formula (2), which comprises a step of reacting a diamide represented by the following formula (1) with NaOX [wherein X stands for a bromine atom (Br) or a chlorine atom (Cl)] at a molar ratio of the NaOX to the diamide (NaOX/diamide ratio) in the range of 3.0 - 6.0 and NaOH at a molar ratio of the NaOH to the diamide (NaOH/diamide ratio) in the range of 1.8 – [[6.0]] 4.0,

$$F_{l} Y_{m}$$

$$(CONH_{2})_{2}$$

$$(1)$$

$$F_{1} Y_{m}$$

$$(NH_{2})_{2}$$

$$(2)$$

wherein in the formulas (1) and (2), Y stands for a hydrogen atom (H), a bromine atom (Br), a chlorine atom (Cl), a fluorine atom (F), a C1 - C5 alkyl group optionally having a substituent, or a C1 - C5 alkoxyl group optionally having a substituent, l is an integer in the range of 1 - 4, m is an integer in the range of 0 - 3, provided that the total number of l and m (l + m) is 4; and, upon completion of the reaction, adding an alkali to adjust the pH of the solution to be in the range of 9 to 14.

Applicant(s): Shinji Nishimae Serial No.: 10/561,048

Filed: December 14, 2005

2. (Original) A method according to claim 1, wherein said diamide is reacted with NaOX and NaOH at a temperature in the range of 0 - 20°C and the resultant reaction product is heated at a temperature exceeding 20°C and not exceeding 100°C.

Attorney Docket No.: 60004-109US1

Client Ref. No.: F 04-038-PCT/US/NS

3. (Previously presented) A method according to claim 1, wherein said diamide is a diamide represented by the following formula (4) and said phenylenediamine is a phenylenediamine represented by the following formula (5),

$$H_2NOC$$
 $F_3$ 
 $F$ 

wherein in the formulas (4) and (5), Y stands for a hydrogen atom (H), a bromine atom (Br), a chlorine atom (Cl), a fluorine atom (F), a  $C_1$  -  $C_5$  alkyl group optionally having a substituent, or a  $C_1$  -  $C_5$  alkoxyl group optionally having a substituent.

- 4. (Previously presented) A method according to claim 1, wherein the molar absorption coefficient of the fluorinated phenylenediamine represented by the formula (2) at a wavelength of 450 nm is not more than 2.5 (l/mol·cm).
- 5. (Currently amended) A method for the production of a polyamic acid represented by the formula (9), which comprises the steps of:

producing a fluorinated phenylenediamine represented by the formula (2) by reacting a diamide represented by the formula (1) with NaOX [wherein X stands for a bromine atom (Br) or a chlorine atom (Cl)] at a molar ratio of the NaOX to the diamide (NaOX/diamide ratio) in the range of 3.0 - 6.0 and NaOH at a molar ratio of the NaOH to the diamide (NaOH/diamide ratio) in the range of 1.8 – [[6.0]] 4.0; and

reacting the fluorinated phenylenediamine with tetracaraboxylic acid represented

Client Ref. No.: F 04-038-PCT/US/NS

$$F_1$$
  $Y_m$  (1)  $(CONH_2)_2$ 

$$F_{1} Y_{m}$$

$$(NH_{2})_{2}$$

$$Y_{m}$$
NHOC CONH (9)

whereinY stands for a hydrogen atom (H), a bromine atom (Br), a chlorine atom (Cl), a fluorine atom (F), a  $C_1$  -  $C_5$  alkyl group optionally having a substituent, or a  $C_1$  -  $C_5$  alkoxyl group optionally having a substituent, l is an integer in the range of 1 - 4, m is an integer in the range of 0 - 3, provided that the total number of l and m (l + m) is 4, and X' stands for a tetravalent organic group.

6. (Currently amended) A method for the production of polyimide represented by the formula (10), which comprises the steps of:

producing a fluorinated phenylenediamine represented by the formula (2) by reacting a diamide represented by the formula (1) with NaOX [wherein X stands for a

wherein Y stands for a hydrogen atom (H), a bromine atom (Br), a chlorine atom (Cl), a fluorine atom (F), a  $C_1$  -  $C_5$  alkyl group optionally having a substituent, or a  $C_1$  -  $C_5$  alkoxyl group optionally having a substituent, 1 is an integer in the range of 1 - 4, m is an integer in the range of 0 - 3, provided that the total number of 1 and m (l + m) is 4, and X' stands for a tetravalent organic group.

Attorney Docket No.: 60004-109US1

Client Ref. No.: F 04-038-PCT/US/NS

7. (Previously presented) A method according to claim 2, wherein said diamide is a diamide represented by the following formula (4) and said phenylenediamine is a phenylenediamine represented by the following formula (5)

$$F_3$$
 $H_2NOC$ 
 $F_3$ 
 $F$ 

wherein in the formulas (4) and (5), Y stands for a hydrogen atom (H), a bromine atom (Br), a chlorine atom (Cl), a fluorine atom (F), a  $C_1$  -  $C_5$  alkyl group optionally having a substituent, or a  $C_1$  -  $C_5$  alkoxyl group optionally having a substituent.

- 8. (Previously presented) A method according to claim 2, wherein the molar absorption coefficient of the fluorinated phenylenediamine represented by the formula (2) at a wavelength of 450 nm is not more than 2.5 (l/mol·cm).
- 9. (Previously presented) A method according to claim 3, wherein the molar absorption coefficient of the fluorinated phenylenediamine represented by the formula (2) at a wavelength of 450 nm is not more than 2.5 (l/mol·cm).
